***Reasons for Allowance***

1. Claims 1-6 and 11-16 are allowed over the prior art of record. Claims 1-6 and 11-16 are renumbered as 1-12 respectively.
2. The present invention is directed to a method wherein a client side physical computer into which the job is loaded issues a job execution request to a server side physical computer and the job execution request is accompanied by job execution statements and environment information. Each independent claim identifies the uniquely distinct features "assigning a server side volume for the logical computer corresponding to a client side volume through a process of creating volume correlation information with use of the volume logical path and the volume physical path on the client machine side included in the environment information and the acquired volume logical path and the acquired volume physical path for the logical computer, controlling transfer of input data on the client side volume to a server side volume based on the volume correlation information, converting the environment information and the job execution statements based on the volume correlation information so as to replace information about the volume logical path and the volume physical path included in the job execution request by corresponding information for the logical computer of the server machine where the job is to be executed, and further replace the program product name and the version by corresponding information for the server machine on an as- needed basis". The closest prior art, Kataoka (US 2001/0056462) fails to anticipate or render the above underlined limitations obvious.
